Features

Mercury's Low Jitter Differential VCXOs , with a low current consumption (22 mA for CMOS 100 MHz at 3.3V) and an integrated phase jitter performance of 0.6 ps RMS. Gaining its precision frequency control market position by providing engineers with few-day samples for prototypes and low cost, fast delivery for volume production. The perfect solution to replace traditional XO's & VCXO's that use a more expensive, highfrequency, fundamental crystal and a noisy PLL multiplier circuit.
